A practical guide for the identification and management of a range of hazardous wastes, *Waste Management Practices: Municipal, Hazardous, and Industrial* integrates technical information including chemistry, microbiology, and engineering, with current regulations. Emphasizing basic environmental science and related technical fields, the book is an introductory manual for waste management as mandated by Resource Conservation and Recovery Act and related statutes.

The first section of the book provides an overview of the historical and regulatory development of waste management. The second section delineates the management of municipal solid waste and includes coverage of conventional (e.g. sanitary landfill, aerobic composting) and innovative (bioreactor landfill, high-solids anaerobic digestion) technologies. The third section addresses hazardous wastes and their management, including identification, transportation, and requirements for generators and for treatment, storage, and disposal facilities. Disposition via incineration, chemical treatment, and land disposal are covered. The final section explores special categories of waste that often cannot find a regulatory "home" under either RCRA Subtitle D (Solid Wastes) or Subtitle C (Hazardous Wastes). Example waste types include used oil, construction and demolition debris, and electronics waste.

The garbage crisis, as it became known in the late 1980s, will not go away as long as humans continue to produce materials that nature does not possess the capability to decompose. Yet there are few, if any, references that collectively and comprehensively address the management of household, industrial, commercial, and hazardous wastes. Filling this need, *Waste Management Practices* focuses on the entire spectrum of wastes and their management.

As a university student exactly feel bored to help reading. If their teacher requested them to go to the library in order to make summary for some book, they are complained. Just minor students that has reading's heart and soul or real their passion. They just do what the instructor want, like asked to the library. They go to right now there but nothing reading critically. Any students feel that studying is not important, boring and also can't see colorful pics on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever we would like. Likewise word says, ways to

reach Chinese's country. Therefore this Waste Management Practices: Municipal, Hazardous, and Industrial can make you truly feel more interested to read.
